

E+I ENGINEERING GROUP

HIGH POWERBAR

UL857 ALUMINUM

PowerBar

HIGH POWERBAR

UL857 ALUMINIUM

E+I Engineering's High Powerbar (HPB) UL857 range is a 600 Volt totally encased, non-ventilated, low impedance busduct. The range is available from 800A - 4000A with multiple bar configurations to suit project requirements.

The busduct is housed in an aluminum casing which acts as a ground. Ingress protection ratings are available from IP55 - IP67.

Features:

- Epoxy resin coated copper conductors with tin or silver coated finish
- Joint pack construction with double headed shear bolts for quick installation
- Up to five busplug points per 12ft length
- All busplugs have mechanical/ electrical interlocks with a 'ground first, break last' safety feature
- Pressed out tags for busplug connections

STANDARDS

Standards

The HPB UL range is UL857 listed and manufactured in a certified management system environment where Quality ISO 9001, Safety OHSAS 18001 and Environmental ISO 14001 standards are applied to all aspects of the manufacturing and installation processes. We meet the requirements of NEMA, CSA, IEEE, ANSI, IEC & CE.

UL Listed

Powerbar completed extensive testing at UL accredited laboratories to ensure the product we supply meets UL requirements.

UL 857

Sub-clauses Description

8.2.1	Verification of Temperature Rise Limits
8.2.2	Verification of Dielectric Voltage Withstand Test
8.2.2.2	Clamped Joint Test
8.2.2.3	Reduced Insulation Thickness Test
8.2.3	Verification of Short Circuit Withstand
8.2.3.1.1.2	Dielectric Test Withstand Tests
8.2.6	Verification of Insulation Resistance and Dielectric Withstand After Exposure to Rain
8.2.7.1	Verification of Bending Resistance
8.2.7.2	Verification of Impact Strength
8.2.7.3	Verification of Crushing Resistance
8.2.7.4	Verification of Resistance to Bus Bar Pull Out
8.2.8	Verification of Overload and Endurance of Non-Switching Plug-in Devices
8.2.9	Verification of Resistance to Aging
8.2.10	Verification of Metallic Coating Thickness
8.2.11	Verification of Insulation Base and Support Strength
8.2.12	Gasket Tests
Ref to ANSI/UL 50	Type Rating Tests (Ingress Protection Tests) for the 2 series

Seismic Compliance

The product range is certified for Seismic withstand capability and has a qualification level - high (Zone-5) in accordance to IEEE standard 693-2005.

All certificates available on request

OHSAS 18001:2007
OHS 533652

ISO 9001:2008
FM 12680

ISO 14001:2004
No: EMS 566536

TECHNICAL FEATURES

UL Fire Stop System

- High Powerbar is constructed from high density 55% conductivity aluminum
- The low impedance sandwich design:
 - Improves heat dissipation
 - Improves short circuit rating
 - Reduces voltage drop/ impedance
 - Removes potential pathways for flame, smoke and gas
- E+I Engineering's patented process of pressed out tabs to connect busplugs protects the integrity of the conductor
- HPB is constructed with an all-aluminium housing. Aluminium is an extremely light metal and is cheaper and easier to install than steel. Aluminium is much less reactive than steel so it is more durable and easier to maintain.
- E+I Engineering offer a 50% or 100% fully isolated ground for systems where ground isolation is required.
- A fully rated 200% neutral option is available for busduct systems with non-linear loads. The additional neutral capacity prevents overloading caused by zero sequence harmonic currents
- HPB UL857 can be used in 'Through-Penetration Fire Stop Systems' as listed in the UL Fire Resistance Directory

TECHNICAL FEATURES

Phase Configurations

Configuration	Phases	Neutral	Ground
TP	100%	0%	Case
TP/N	100%	100%	Case
TP/E	100%	0%	100% or 50%
TP/NE	100%	100%	100% or 50%
TP/DN	100%	200%	Case

Note: Case refers to the Aluminum casing being used as a ground.

STRAIGHT LENGTHS

Feeder lengths account for the bulk of a busduct run

Distribution lengths allow Busplugs to be plugged into the busduct run

Straight Lengths

Straight lengths can be supplied at any length from 23.6in - 9.84ft.

The busplug slot outlet and cover are made from a durable, high strength, Class B, 130°C insulation material.

The busplug slot cover prevents access to the contacts behind the cover and protects it from the entry of dirt, dust or moisture. Busplugs are IP55 as standard but higher levels up to IP67 can be provided upon request.

Busduct Rating (Amps)	Construction Type	Busduct Size			
		Width		Height	
		in	mm	in	mm
800A	Single	4.72"	120mm	5.83"	145mm
1000A	Single	5.51"	140mm	5.83"	145mm
1200A	Single	6.30"	160mm	5.83"	145mm
1350A	Single	6.89"	175mm	5.83"	145mm
1600A	Single	8.07"	205mm	5.83"	145mm
2000A	Single	10.24"	260mm	5.83"	145mm
2500A	Double	14.76"	375mm	5.83"	145mm
3000A	Double	17.13"	435mm	5.83"	145mm
4000A	Triple	23.82"	605mm	5.83"	145mm

Note: The maximum and minimum sizes recommended are not the limits of what can be produced, but a guideline to help you choose the correct product. Dimensions are taken from the centre of the joint.

ELBOWS

Flatwise Elbows

Edgewise Elbows

Flatwise and Edgewise Elbows

Flatwise and edgewise elbows are used to make 90° changes in the direction of the busduct system. E-I Engineering can also manufacture specially angled elbows for both flatwise and edgewise products.

Flatwise Elbow (Up or Down)

Ratings (Amps)	Minimum Leg Size		Standard Leg Size		Maximum Leg Size

FLANGES

Panel Flange

Parallel Flange

Flange Connections

Flange connections provide a direct connection to low voltage switchgear, transformer enclosures and other electrical equipment. Standard flanges can be offset to the left or right of the section as required.

Panel Flange

The dimension (X) for the flange connection ranges from 9"/229mm up to 33"/838mm for the range 800A - 4000A.

Panel Flange

Ratings (Amps)	Minimum		Maximum	
	X		X	
	in	mm	in	mm

Expansion Unit

Expansion Units

Expansion units are used to accommodate the expansion and contraction of a busduct system as well as allow for building movement. They allow for a 1.57" movement along the length of the busduct.

Expansion units are recommended when a straight busduct run exceeds 196ft.

CABLE FEED UNITS

Cable Feed Units

End feed units are used on the ends of busduct risers which are cable fed. Center feed units are used in the middle of busduct risers which are cable fed.

The size of cable feed required depends on a number of factors:

- rating of busduct
- size of cable
- number of cables
- use of a protective device or isolator

End Feed Units

Center Feed Units

End Caps

End caps are used to safely cap off the end of a busduct run. The end cap units are factory fitted but can be easily removed to allow for the extension of the system.

End Caps

SPLICE

Joint Pack

E+I Engineering's Splice

E+I Engineering's splice is a compression joint design utilising a specially designed Belleville washer to distribute the pressure evenly over the splice. The splice is supplied in specific sizes depending on the rating of busduct required.

Flatwise elbow splices can be used to make 90° changes in the direction of the busduct system.

Flatwise Elbow Joint Packs

INSTALLATION

The modular design of HPB allows it to be installed flat or on its edge.

Edge installation

Edge installation is the preferred method of installation for a smaller rated busduct system.

Flat Installation

Flat installation is the preferred method of installation for a higher rated, multistack busduct system. When installed on its flat all busduct rating has a height of 145mm.

Spring Hanger

Spring hangers are used to support vertical busduct runs on the floor. They compensate for building movement and thermal expansion.

Special Pieces

E-I Engineering manufacture a variety of more specialised units and components to meet unique system requirements. These include: edgewise tee's, flatwise cross, step up/ step down reducers, phase rotation units, in-line disconnect cubicles, in-line busplugs, custom built busduct connection units.

Voltage Drop Full Load 60Hz per 100ft				
Power Factor = 0.7 (V/100ft) at 176°F	3.070	3.315	3.159	2.878
Power Factor = 0.8 (V/100ft) at 176°F	3.358	3.639	3.460	3.148
Power Factor = 0.9 (V/100ft) at 176°F	3.612	3.928	3.726	3.386
Power Factor = 1.0 (V/100ft) at 176°F	3.675	4.028	3.802	3.445

HIGH POWERBAR

UL857 ALUMINIUM

QUICK REFERENCE GUIDE

Critical Dimensions

- The distance from the centre of a joint to the wall, ceiling or floor must be at least 190mm.
- All joints must be accessible for maintenance. Joints should not be located inside a wall, ceiling or floor.
- There must be a minimum distance of 50mm between the busbar and any wall/ ceiling/ other busbar.
- Allow adequate space for tap off units to be installed easily and safely.
- Busbar lengths are available from 600mm - 3000mm.
- Distribution busbar lengths are available from 600mm - 3000mm.
- Edgewise elbow sections are available with leg lengths from 255mm - 600mm.
- Flatwise elbow sections are available with a maximum leg length of 750mm. The minimum leg length varies depending on the busbar.

Operating Conditions

- Ambient temperature from -5°C to +55°C
- Relative humidity of 95% or below.
- This product designed for indoor use and can be installed horizontally or vertically.

Critical Details

- Busbar drawings must include all relevant dimensions. Centre-line dimensions are expected. Please highlight any dimensions that are not centre-line.
- Walls and floors must be indicated and the relevant dimensions provided.
- The phasing and location of all switchboards must be provided.
- Full details are required for any transformer connections.
- Horizontal busbar must be installed with the neutral phase to the top. Please indicate the phase orientation for vertically installed busbar.
